Ardmore Power Logistics Joins U.S. EPA SmartWay Transport® Partnership

Lakewood, Oh – Ardmore Power Logistics today announced that it joined the SmartWaySM Transport Partnership, a innovative collaboration between U.S. Environmental Protection Agency (EPA) and the freight industry designed to increase energy efficiency while significantly reducing greenhouse gases and air pollution.

Ardmore Power Logistics will contribute to the Partnership's goal to reduce 33 to 66 million metric tons of carbon dioxide and up to 200,000 tons of nitrogen oxide per year by 2012 by improving the environmental performance of our freight operations. Carbon dioxide is the most common greenhouse gas, and nitrogen oxide is an air pollutant that contributes to smog. By joining SmartWay Transport Partnership, Ardmore Power Logistics demonstrates its strong environmental leadership and corporate responsibility.

"Ardmore Power Logistics has always been a progressive logistics company and is pleased to be part of the SmartWay Program, which permits our customers to achieve their own environmental goals while promoting more environmentally friendly carrier choices. We have received extremely positive feedback from our clients and carriers regarding the program." Said General Manager David Cottenden.

Launched in February 2004, the SmartWay Transport Partnership aims to achieve fuel savings of up to 150 million barrels of fuel per year. The Partnership brings together major freight shippers, trucking companies, railroads, logistics companies and trade/professional associations to pursue mutually beneficial efficiencies that result in emissions reductions and other environmental improvements, as well as cost savings to the companies. The Partnership currently has over 1800 Partners.

Located in Lakewood Oh, and founded in 2000 Ardmore Power Logistics principal activities are providing 3rd party logistics services to the energy industry. A full service provider, the company reduces cost and improves service in the transportation link of the supply chain. The company activities are carried out through three segments: transportation management, web based interfaces, and freight audit and payment.
